

How to activate Screenpresso from FREE to PRO version

I] Download and install the latest available version of Screenpresso

- 1) If you haven't install **Screenpresso** yet :

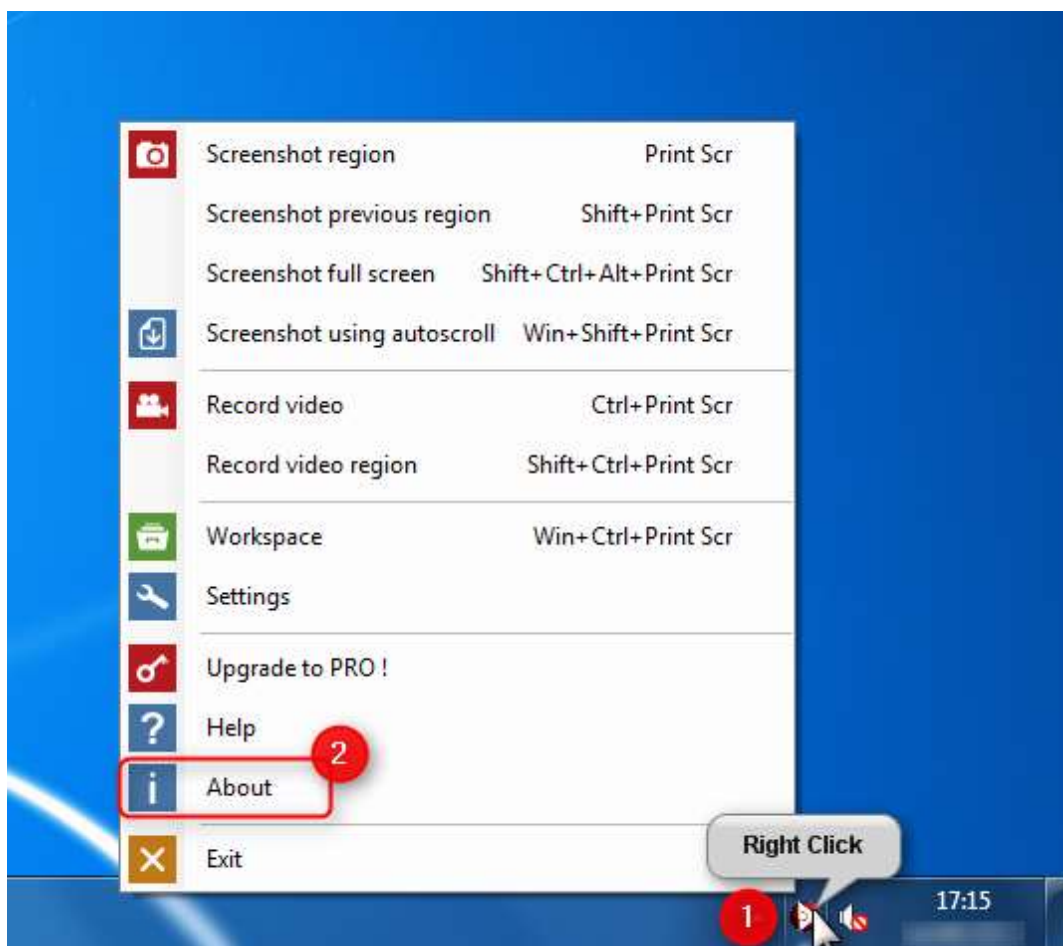

Download **Screenpresso** (this is the same file for the Free and Pro version) from the official Web site:
<https://www.screenpresso.com/download>

As explained on the Web page, Microsoft .NET Framework 4 or above is required before installing Screenpresso.

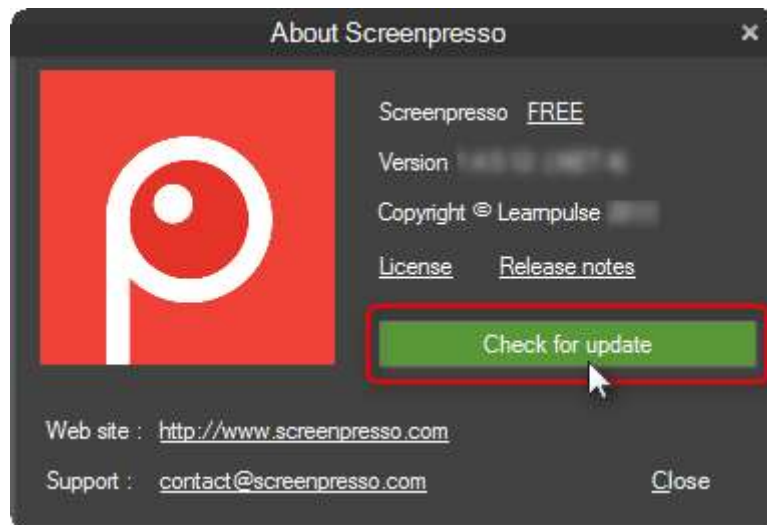

At startup, click on "Install".

- 2) If you have already installed **Screenpresso**, check if you have the latest updates from **Screenpresso** itself:

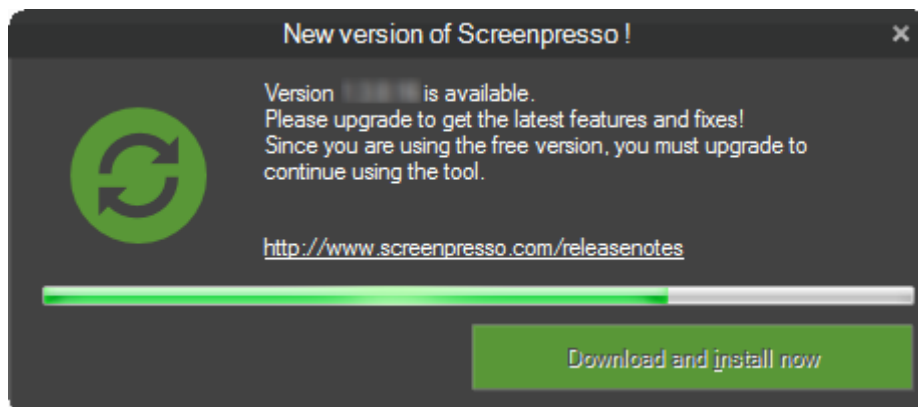

- Right-click on the Screenpresso Systray icon (1) and click on "About us" (2):

- Click the « Check for update » button:

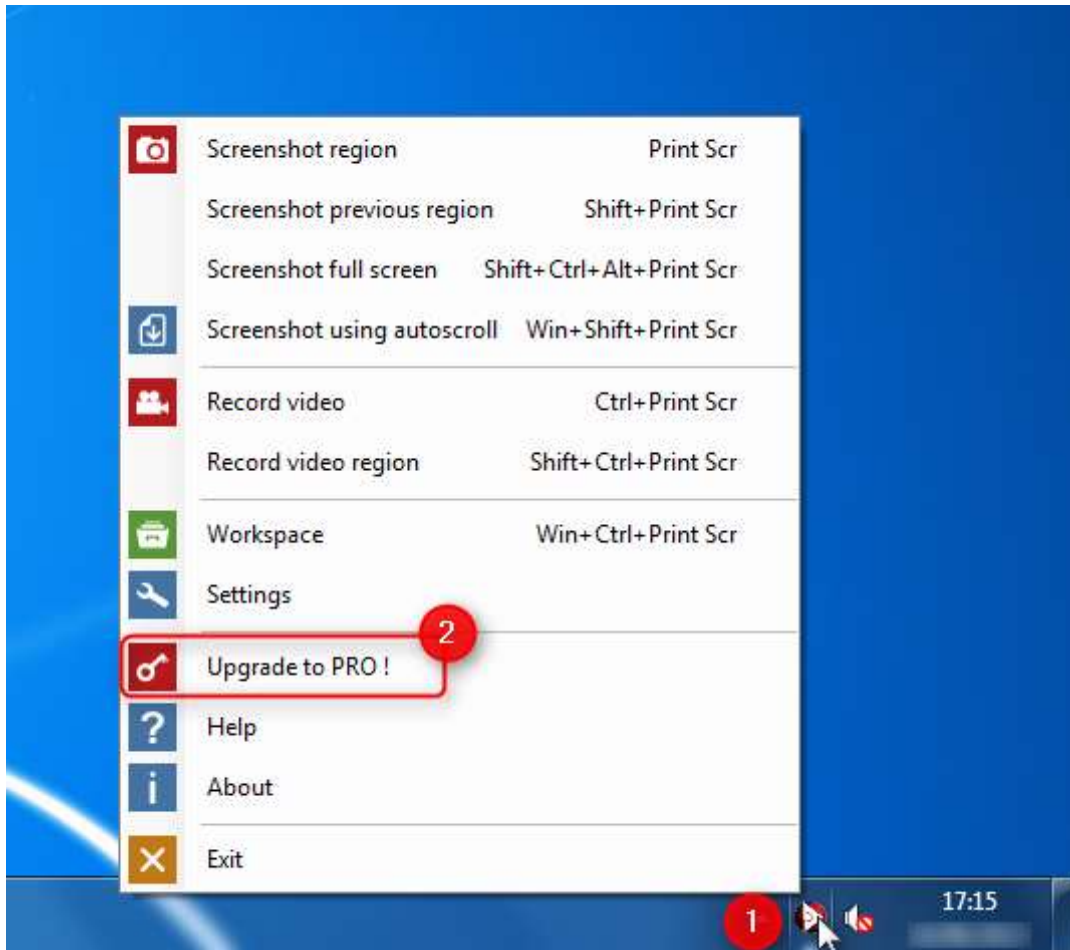

- Accept the update:

II] Enter your activation key

- Right-click on the **Screenpresso** icon (1) and click on “Upgrade to PRO!” (2)

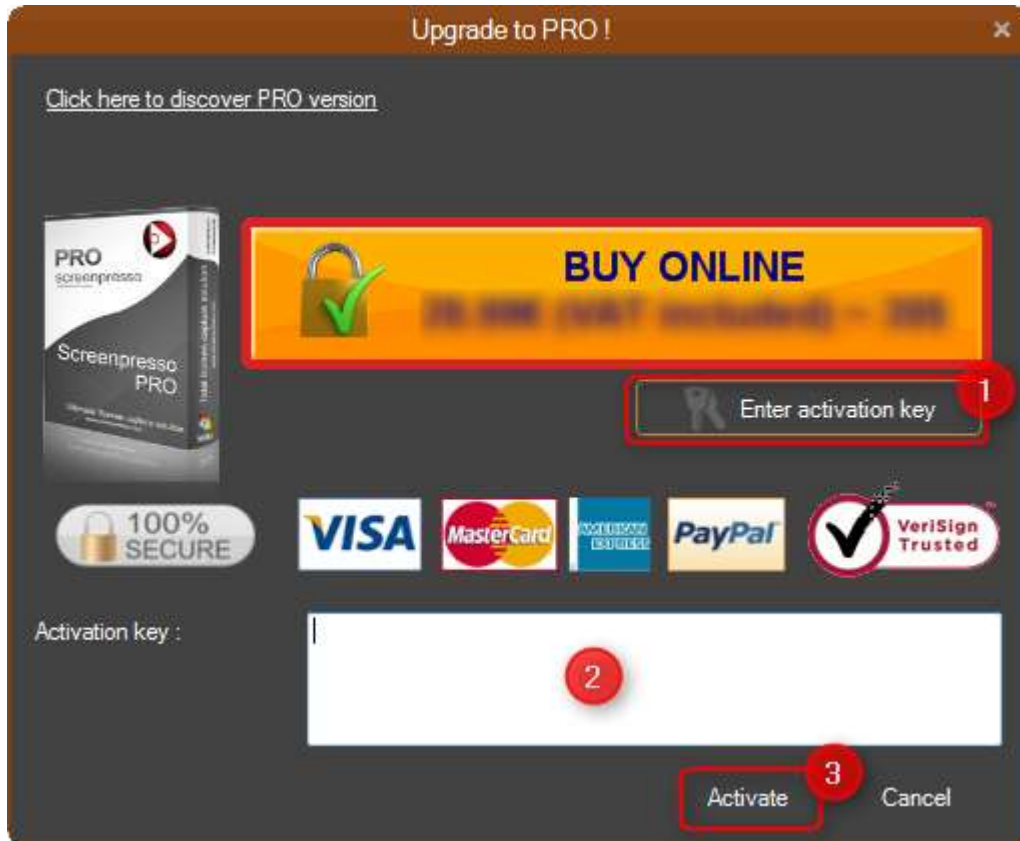

- In the following window, click on button “Enter activation key” (1) and enter your activation key in (2). Use a copy-paste action to avoid errors. Your key should look like:

[0]-[screenpressopro]-[1]-[1234455]-[12/18/2011]-

[Rstyaoiyzonveozienvozienqsdovsodpdovpsodvjspodvjspodjvspovjvspdojg==]

If you have lost your activation key, go to <https://www.screenpresso.com/retrieve>

- Then click on the “Activate” button (3)

- If your activation key is valid, the **FREE** version is switched to the **PRO** version and the limitations are removed.

Warning, an activation key can be used only 5 times. You should then backup Screenpresso settings including the license. A restore can be done on the same computer as many times as necessary.
